Please read this manual carefully before using the ACTUS-XL DB Kit!
Thank you for purchasing a Cambo product.

The Cambo ACTUS-XL is a new view camera system, evolved from the ACTUS and ULTIMA series. Where the Actus Mini excels in being the lightest and smallest camera platform, the ACTUS-XL system is a fusion of both the Actus and Ultima camera platforms, maintaining full camera movements. Modular is the keyword. The Actus-XL accepts all Actus lens plates and lens adapters, sharing the same mount. On the rear standard you find an easy exchangeable frame holder for either a digital back or a DSLR/Mirror less camera body. Both front and rear standard have lateral movements, vertical adjustments, swings as well as tilts, all for optimized control over perspective and selective sharpness.

With the use of full view camera movements the photographer will be able to be more versatile, be more creative and will be getting more professional results much faster than before.

**Configuration of the ACTUS-XL DB Kit:**

3. Warnings

⚠ Due to the modularity of the Actus camera system, many camera-lens combinations are possible. Please beware that there is a possibility, with some camera-lens combinations, that the rear element of the lens collides with the rear standard or attached camera. Please note that Cambo is not responsible for any damage done to the Actus, lens or camera, due to improper or careless use.

⚠ (Over)exposure to direct sunlight or heat sources will damage the leather bellows. Keep/store the leather bellows in a cool, dry, dust free and ventilated place.

⚠ The Actus uses disc magnets to mount the bellows. These permanent magnets (magnetism N45) could cause temporary or permanent damage to equipment\(^1\) sensitive to magnetism like magnetic cards (credit card, ATM card).

⚠ Beware that some combinations of swing, tilt, shift and focus adjustments can dismount the bellows.

\(^1\) Please note that memory cards are not magnetic data carriers and will therefore not be damaged by static magnetic fields.
