

Thank you for taking you time to visit Cambo B.V. at Photokina, Cologne, 21st September 2010.

At the show Cambo announced the renewed Wide RS camera & lenses, the RPS reproduction system and HDSLR CS Camera Support System.

With over 60 years of experience and knowledge in the professional photographic business Cambo lead the way in developing innovative products.

CAMBO 'NEW' WIDE RS

The Wide RS system has been developed from the demands of architectural, interior and landscape photographers who want a lightweight portable camera to produce the finest quality images.

We have renewed 'Wide RS' with new wooden grips for the camera body and improved the camera controls with non-slip silicon. At the show we presented the Wide RS with leather finish to the body. An exclusive version will produced in the near future.

CAMBO 'NEW' WTS - Wide Tilt-Swing Lens Panels

Cambo also presented the Wide lens panel with built-in tilt and swing movements for the Wide RS, Wide DS and Wide Compact. The WTS lens panels have their mechanisms built-in, so there is no need for additional adaptors or bellows. This ensures very precise sharpness on the focus plane and exact parallel alignment of the CCD and lens.

Key features:

- Knob driven, fine geared movements for tilt and swing
- +5 / -5 degrees Tilt, +5 / -5 degrees Swing in both directions
- Tilt and Swing in separate movements, which can be used simultaneously or individual
- No adaptors required as all mechanical parts are built-in
- Interchangeable with existing Wide RS, DS and Compact cameras and lens panels
- Options to retrofit into WTS lens panel
- Available with Schneider lenses Digitar 43,47, 60, 72, 90 and 120
- Available with Rodenstock lenses Digaron 28, 32 40, 50, 70 and 90
- Shift possibilities in the Wide RS body without changing the lens position

CAMBO 'NEW' RPS REPRODUCTION SYSTEM

The RPS System is a modular copy stand solution designed for maximum flexibility. A heavy duty reinforced aluminium column can be mounted to the wall or used as a stand-alone solution fitted to a rigid steel base.

Fluid and easy to use the column is fully motorised with high/low and variable speed controls to prevent any operational movement.

The RPS can be used with a wide range of cameras utilising the fine adjustable camera arm. The arm is adjusted across the baseboard to compensate the depth of camera to the centre of the capture area.

For the ultimate solution, Cambo's dedicated Wide DS repro camera can be mounted directly to the column. The Wide DS gives you more control of the capture and the highest quality image when used with a digital camera back and optimised lenses from Schneider and Rodenstock.

CAMBO 'NEW' CS HD SLR CAMERA SUPPORT SYSTEM

The CS System is a modular 'rig' designed to support Digital SLR and DV camera systems when shooting High Definition video. All CS systems offer the photographer or videographer support to achieve stable images and precision capture control.

As a modular system you can pick and choose what you need and then later add accessories to your system in the future. The CS is fully adjustable to the operator making the shoot as comfortable as possible.

'Hands-on' demonstrations will be made to show the full functionality of using the CS support rig. There is a wide range of add-on accessories, such as Matte Box kits, Follow Focus Controller, shoulder support and optical loupes. Alternatively there are options to purchase complete 'off the shelf' systems.

CAMBO ULTIMA

Unlike any other imaging system on the market today, the Cambo Ultima offers a wide range of unlimited possibilities. It is a modular camera system, engineered to maximise the use of formats between the digital SLR, medium format digital backs and 4x5.

There are three Cambo Ultima systems: The Ultima 23 for high quality medium format imaging, the Ultima 45 for high end large format imaging and the Ultima 35 a unique solution which accepts a variety of professional SLR cameras to provide them with the image control capabilities of the view camera.

CAMBO X-2 PRO

Perfect for product, architectural and landscape photographers, Cambo's innovative X2-PRO provides perspective and image-control movements for Canon and Nikon digital SLR cameras.

Photographers who are using high quality digital cameras such as the PhaseOne DF can integrate their systems to be used with the X-2 PRO. Cambo have adaptor plates available for both Universal and Mamiya DF fittings.

STUDIO STANDS & VIDEO BOOMS

To support the camera systems there is a wide range of photographic and video studio products. As well as the ever popular UBS/UST Studio stands there are shooting tables, tripods/heads, Video booms and pedestals on show.

HISTORY

Cambo BV was founded in The Netherlands in 1946 and has the distinction of being the first studio camera manufacturer to produce an all-metal large format camera. Cambo has since built a reputation for high quality, precision engineered Cameras, Repro stands, Studio & Video support equipment and accessories.

Today, Cambo is based in a modern 2,000 sq m facility equipped with the latest computer controlled design and machine tools, ensuring production to the highest standards. This facility enables Cambo to remain at the forefront and continue to build & develop leading edge products for the future.
