

Holds up to the **wear and tear** of everyday studio use and abuse.

Cambo LEGEND

"The Cambo Legend is my workhorse for home interiors and table-top photographs in the studio. The adjustments are easy, fluid and precise. I use it constantly and it's still as fluid and tight as the day I bought it!"

"One of the 25 best cameras in the world!"

*"When we think of good bargains in view cameras and lenses, one of the first places that should come to mind is, naturally, Calumet. . . (The Cambo Legend is) the soul of the workhorse, all-purpose studio view camera. Every aspect of its design is practical, useful, well-thought-out, and well-executed. (*Best Buy)"*

25 Best Cameras in the World

Strong and Solid Construction for Today's Growing Studio

Cambo's Legend Series cameras are built to take a beating and hold up to the wear and tear of everyday studio use. These solidly designed and ruggedly constructed view cameras are a popular favorite in many of today's large catalog studios because they are so durable and dependable — day-in and day-out. The Legend's all-metal, U-frame standards are among the most rigid ever designed and capable of flawless performance . . . year after year.

Fluid-Smooth Movements

Rack and pinion rise and fall, lateral shifts and fine focusing provide precise image control. All movements are calibrated for quick reference and easy repeatability with convenient zero-position detents.

Easily Extendable Monorail System

The Legend's two-section, split monorail allows for convenient storage and travel, plus provides a short (10") section that is perfect for wide angle work. Cambo's add-on monorail extensions offer quick and smooth transitions from close-ups and macro work to wide angle views and everything in between. Extensions can be added or removed conveniently, without dismantling the camera, and they provide uninterrupted, full-length focusing.

Available With or Without Yaw-free, Base-tilt, Perspective Control

The Legend Plus models feature yaw-free base-tilts which allows the table-top photographer to level the camera's pivot point while shooting, as they often are, with the camera inclined in the downward position. This added tilt movement means no more set-up compromises and helps eliminate shape distortions in your subjects. All Legend series cameras feature standard axial tilt controls and a convenient depth-of-field scale which determines the proper focal point and computes the optimum aperture required to match the sharpness range you desire.

Complete and Economical Accessory System

No matter what camera configuration a shot calls for, there is a Cambo accessory that will fill the bill and will do so more cost-effectively than any other large format system. See pages 11-15 for details.
