

# ARTES Video Boom System

The Artes Video Boom System provides a steady camera platform for the starting Videographer. The System is delivered as a kit, partly premounted. After the first set-up, supported by a very clear instruction, there are no tools needed for quick mounting and de-mounting. The Boom system is modular extended and this way usable in at least two different set-ups. The central unit has four locking knobs for applying friction to the vertical boom movement and to make disassembling easier. The central rotation platform has a low friction bearing system with a rotation brake. It fits to all 75 and 100mm video tripod cups.

Artes shown with optional MPT-9

The standard Tilt Platform is exchangeable for modular accessories like the MPT-9 Pan Tilt Option. The Platform includes holes for 1/4" and 3/8" studs. Both size thumbscrews are supplied with the boom.

Modular system for easy storage and assembly

- **Modular design**
- **Lightweight construction**
- **Economically priced**
- **Quality materials**
- **Provision for screen mount**
- **Option for Pan/Tilt unit**
