

## PRESS RELEASE

### PUT YOUR PIXELS IN PERSPECTIVE WITH THE MAMIYA ZD CAMBO ULTIMA 35 now ready for Mamiya ZD Digital Camera Body.

**April 2006, KAMPEN, The Netherlands** — Cambo Photographic is excited to introduce the implementation of the latest digital camera of Mamiya to expand the capability and versatility of digital photography with the ULTIMA 35 series.

The combination of the 36x48mm Dalsa sensor in the Mamiya ZD camera with the full view camera movements of the ULTIMA 35 offers expanded possibilities for perspective control and depth of field corrections with a higher grade of quality and creativity than ever before, without changing the characteristics and portability of the Mamiya ZD camera.

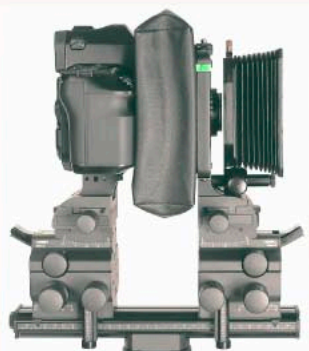

A dedicated mounting block and bellows assure an exact positioning in the optical axis for precise movements and easy focussing through the bright viewfinder. Cambo advises the use of Schneider or Rodenstock lenses for digital applications to be used on the ULTIMA 35.

Also available is a lens adapter plate for the use of Mamiya RZ/RB lenses in combination with the Cambo ULTIMA 35 and the Mamiya ZD.

The ULTIMA 35's design allows today's digital SLR cameras on the market to be expanded into a complete photographic system. This design enables the photographer to photograph studio product, fashion, portrait, architecture or landscapes — both in the studio and on location, tethered to a computer or totally portable and wireless — in a unique combination of ultra-precise view camera movements with state-of-the-art digital technology.

The camera body can be taken off quickly and be used as a handheld camera with its own compatible lenses for shots that require a stand-alone application, and can just as easily be remounted onto the ULTIMA 35 again in perfect alignment for studio shooting.

Dedicated accessories, compatible with the ULTIMA 35, such as compendium lens shade, flat and recessed lensboards and a RZ/RB lens adapter, as well as a vertical mounting adapter are all available. Future developments of new digital SLR cameras can easily be adapted when they will be released. The ULTIMA 35 is also compatible with Cambo's general accessory system and can always be upgraded or retrofitted for other applications.
